SECURITY INCIDENT REPORT

Generated: 2026-09-24 19:51:40

Executive Summary

Metric	Value
Total Logs Analyzed	22
Total Detected Attacks	10
Threat Score	100/100
Overall Risk Level	CRITICAL
Unique Attacker IPs	1

Attack Statistics

Attack Type	Count
Brute Force Sources	1
Invalid User Attempts	2
Root Login Attempts	1
Sudo Abuse Attempts	3
Privilege Escalation Attempts	3

Attacker IP Intelligence

IP Address	Failed Login Attempts
192.168.1.100	6

Security Findings

[HIGH] 192.168.1.100 generated 6 failed login attempts.

[MEDIUM] Invalid user admin from 192.168.1.150

[MEDIUM] Invalid user test from 192.168.1.151

[HIGH] Accepted password for root from 192.168.1.250 port 22 ssh2

[HIGH] user sania executed sudo su

[HIGH] user admin executed sudo -i

[HIGH] user test executed sudo bash

[CRITICAL] sania executed su root

[CRITICAL] usermod -aG sudo test

[CRITICAL] chmod 777 /etc/passwd

Recommended Security Actions

- Investigate repeated authentication failures.
- Review and consider restricting suspicious source IPs.

3. Review root account access and authentication logs.
4. Audit privileged command execution.
5. Investigate privilege escalation indicators immediately.
6. Continue monitoring Linux authentication logs.
